# Tomato Harvesting Robot

Robotics Promotion Office  
Manufacturing Innovation Division  
Panasonic Corporation

### Environment

- Destruction of nature
- Global warming
- Abnormal weather

### Medical

- Nursing
- Public health
- Incurable disease

### Resource

- Lack of resource
- Lack of water
- Atomic power plant

### Labor issues

- Labor shortage
- Long working hours
- Unemployment rate

### Food issues

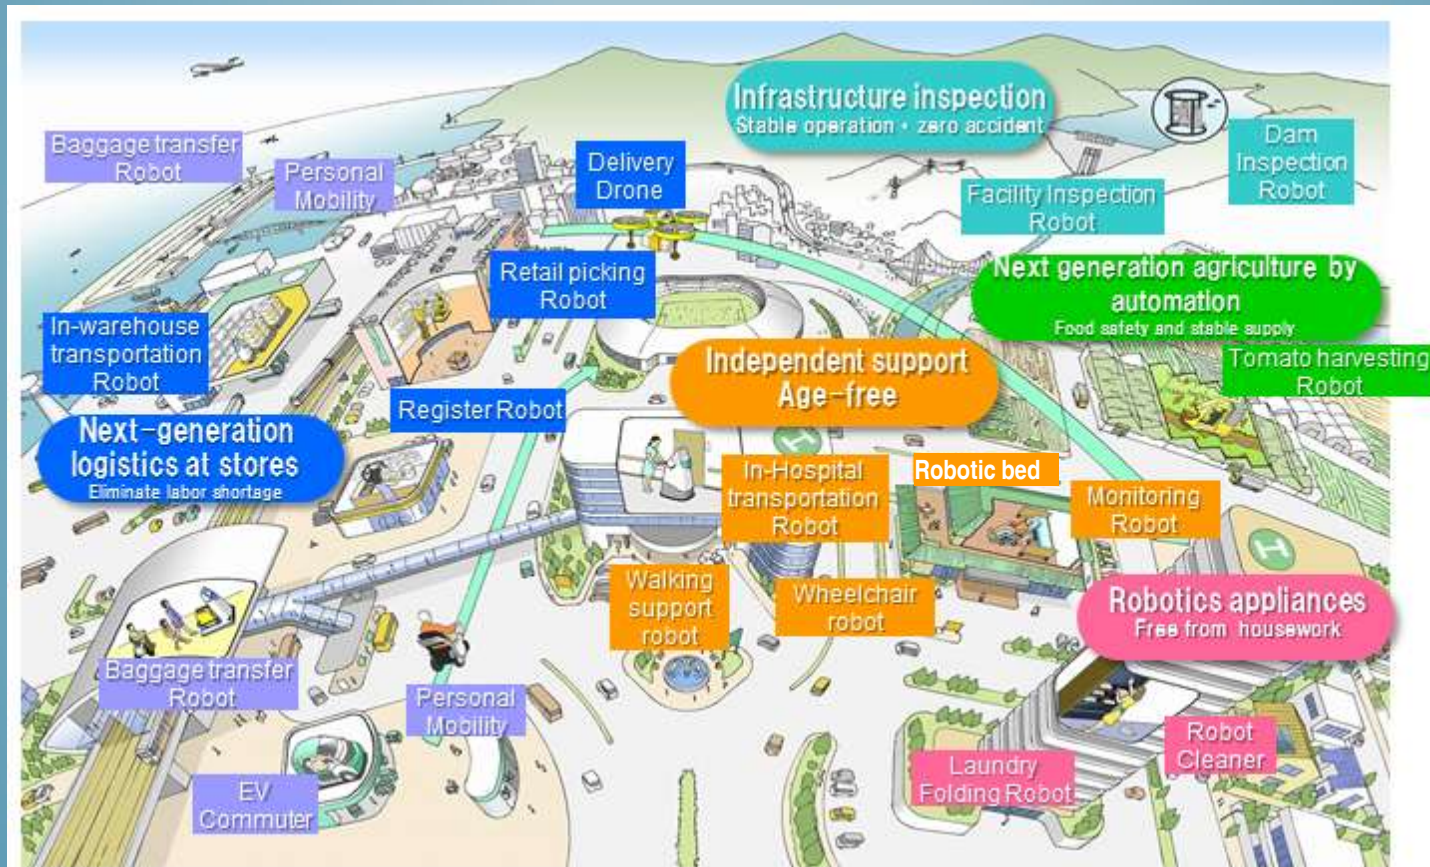

- Safety of food
- Hunger
- Decrease of Farmer

Trying to solve these social problems  
by utilizing robotics technology!

## The World with Robotics Developed by Panasonic

Robotics that stay close to people's lives.

# ROBOT TECHNOLOGY OF PANASONIC

**HOSPI : Autonomous delivery robot.**

# ROBOT TECHNOLOGY OF PANASONIC

Automatic cell culture system : automatic cell culture and passage.

## Technologies of Panasonic

Mass production  
technologyRobotics  
technologyICT/  
Communication  
technologyControl  
technologySensing  
technologyAir conditioning  
technology

## Smart agriculture

① Useful for stable production and  
productivity improvementPassive house type  
farming systems

Plant factory system

Next generation barn  
system

## ② Useful for labor saving

Tomato harvesting robot

Power assist suits

©2018 ATOUN Inc.

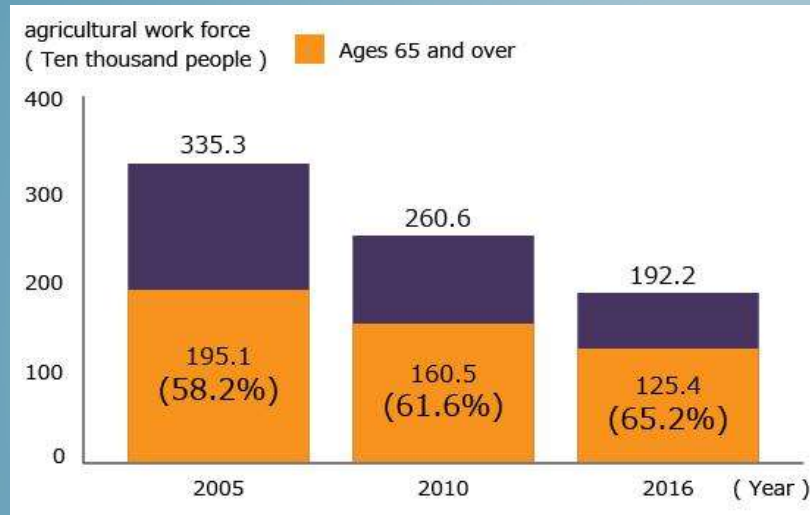

## ③ Useful for data storage and Technology tradition

Integrated environmental  
control system

Farming support

In agriculture, worker shortage is big problem.

In Japan

To solve social problem that the number of labor is decreasing in future by using robot technology.

To make innovation in agriculture.

To create an opportunity of making robot business which uses AI technology.

Introducing technologies of robots to tomato harvesting robot.

**Sensing**

**Autonomous move**

**Manipulation**

**Artificial intelligence**

**Agriculture robot**

# TOMATO HARVESTING ROBOT GENERATION 1

# TOMATO HARVESTING ROBOT GENERATION 2

# TOMATO HARVESTING ROBOT GENERATION 3

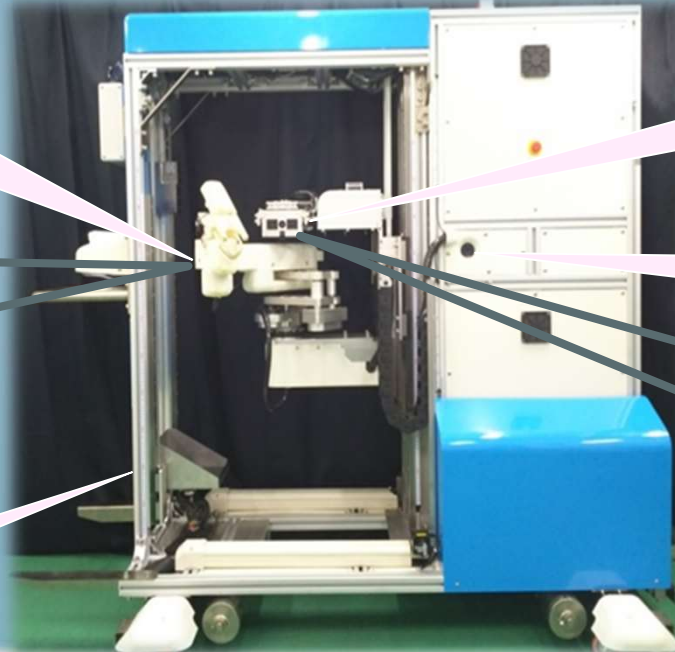

# Design of tomato harvesting robot

**Robot arm** : reaching to tomato fruit  
**Robot hand (End effector)** : Picking tomato

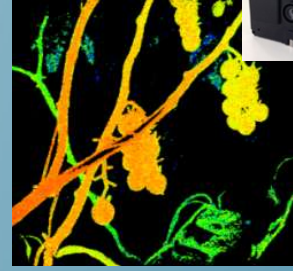

Manipulation preventing the scratches of the fruits

**Basket**  
 : Transferring tomato fruit to the basket

**TOF sensor** :  
 Detecting distance and color of tomato.

**Color camera** :  
 Searching cluster of tomatoes.

3D recognition using distance and image sensors(TOF sensor)

**Size** : 950mm(W) × 1600mm(D) × 1800mm(H)  
**Weight** : 150kg  
**Continuous moving time** : 4hour ※depending on situation  
**Moving speed** : max 30cm/sec

# Eye

Direction of movement

For measuring color of fruits and detecting accurate location of the fruits.

For finding bulk of tomato which has ripe fruits.

# Eye

For measuring color of fruits and detecting accurate location of the fruits, TOF (time of flight) sensor is adopted.

<TOF-sensor (Panasonic)>

Color image

IR image

Depth data

Recognizing color of tomato fruits and location of tomato fruits.

# Hand

## 1. Pulling tomato

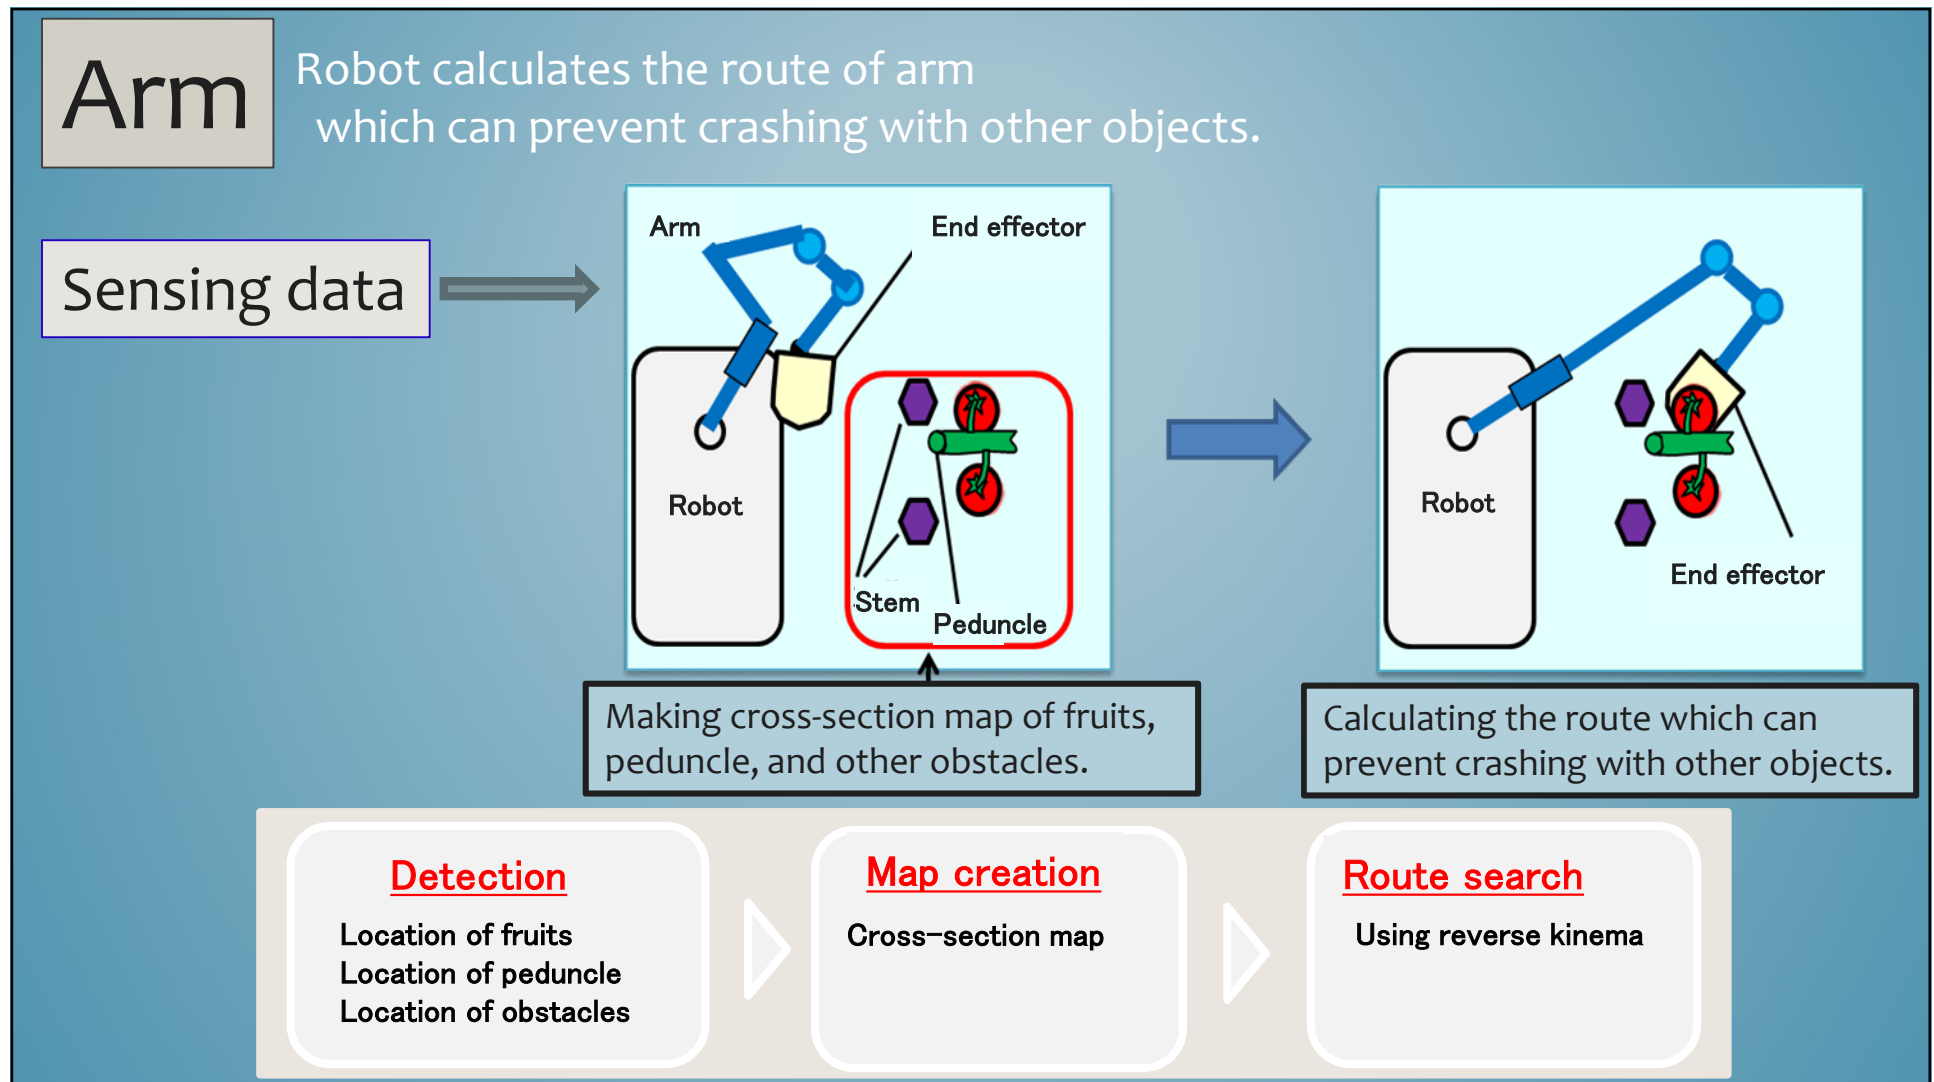

## 2. Inserting picking ring

## 3. Separating and harvesting

Foot

For running on rail

Autonomous moving on rail

# Foot

For running on concrete  
(outside of row)

No autonomous moving

# Brain

Recognizing tomato fruits by utilizing AI technology.

## Collection of learning data

Collecting images for control of sensor

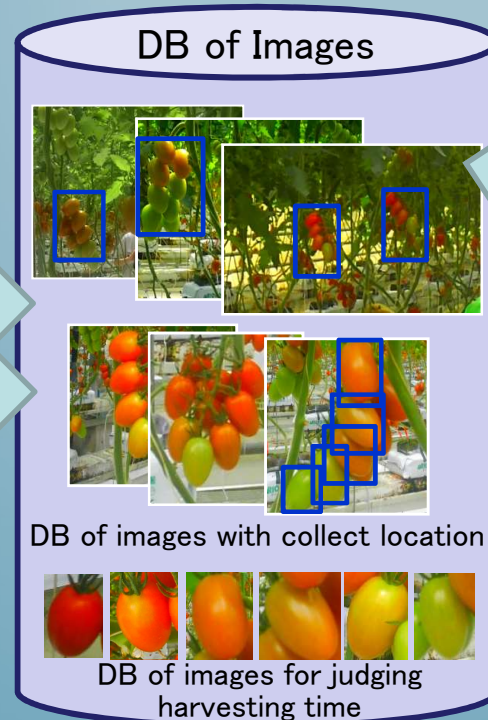

Collecting images for control of robot arm

Annotation:  
Teaching collect information by human

## Construction of Image database for learning

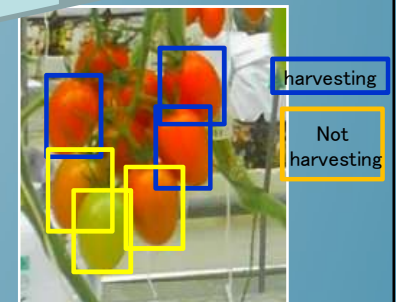

## AI: Recognition of tomato by deep learning

Learning for detection of cluster and fruits.  
Suitable of neural network and parameter.

Detection of tomato cluster

Judgement of harvesting time.

Installing AI to robot

# ROBOT NEVER COMPLAINS

We need rest.  
Tired.....  
I want to go back to home.

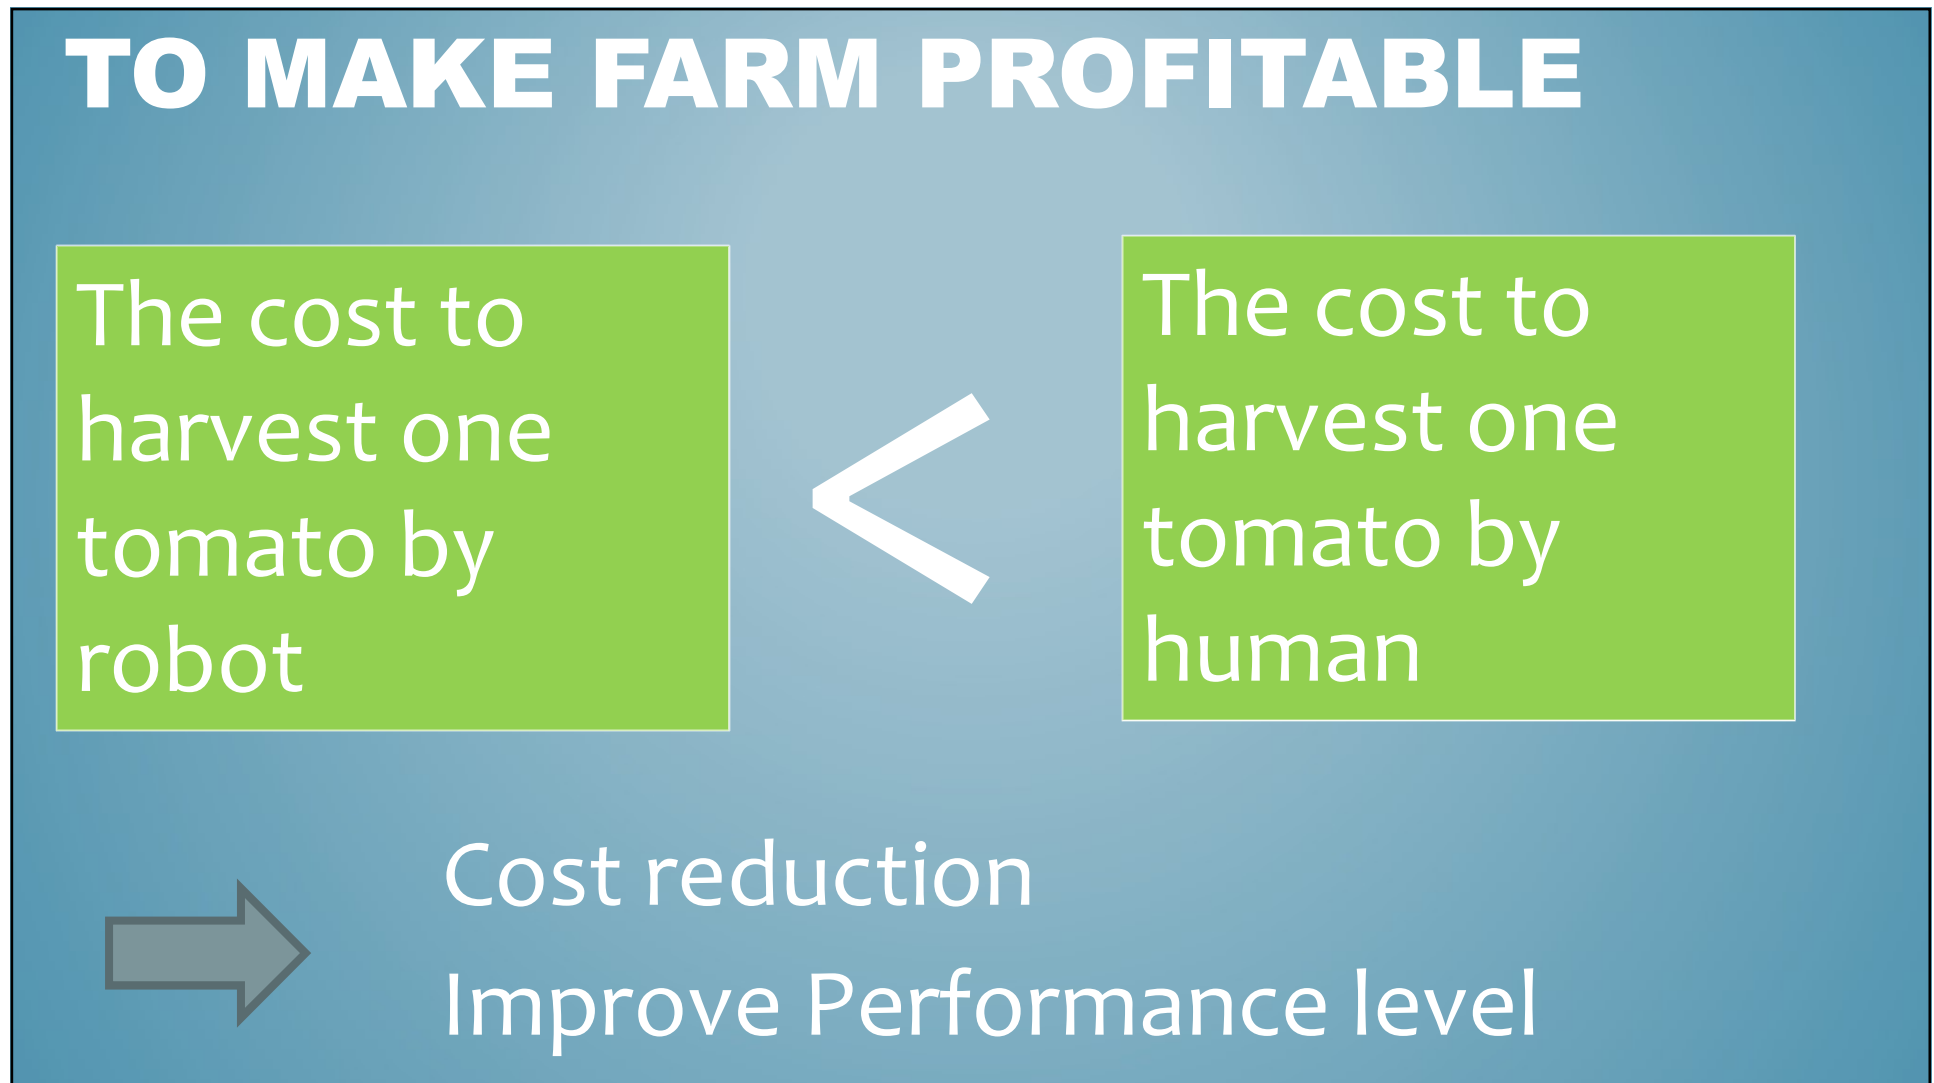

....  
....

Keep on working  
without complaining

# CHALLENGES TO COMMERCIALIZE

1. To improve the performance (picking rate, continuous moving time)
2. To ensure safety in the situation where human and robot co-exist.
3. To develop the function of transfer between rows.
4. To reduce the cost of robot. (To make farms earn money!)
5. To operate this robot stably.(Recovery from short time breakdown)

Improving success rate of picking.  
Dropping tomatoes makes a loss for farm.

Hand is pulling stem and stopping.

# RECOVERY FROM TROUBLE

No recovery system

Engineer has to wake up earlier,,,

# FOR OTHER VEGETABLES

considering utilization of technology of  
tomato harvesting robot to other  
vegetables.

# FOR OTHER VEGETABLES

Eye ⇒ Same vision system is utilized

Hand ⇒ New hand has to be developed

Arm ⇒ Same arm is utilized

Foot ⇒ Depending on situation of land

Brain ⇒ Same system is utilized  
We need data for learning

To make better world by robotics technology is our destination.

Introducing tomato harvesting robot to farm is first step toward our goal.

Please pay attention to our robot technology and new world which our technology will realize!
